Contents

Preface ix

List of Symbols xiii

F 1

Fatigue damage calculation with other assumptions:
Rice's calculation 1
Fatigue damage spectrum 4
FFT 15
Filtering. 17
Filter bank method 17
Filter bandwidth 22
Final adjustment/development test 24
Fourier transform 24
Frequency aliasing 31
Frequency leakage 33
Frequency of resonance 35

G 37

Gamma function 37
Gaussian distribution 40
GCQC3 rule 41
Gerber relation. 42
Goodman relation 42
Graphical representation of spectra 42

Grouping method . . . 44
Gumbel distribution . . . 46
Gupta–Cordero method . . . 47

H . . . 49

Haigh diagram . . . 49
Half-power points . . . 55
Half-sine shock pulse . . . 58
Hann window . . . 61
Haversine shock . . . 62
Henry's relation . . . 62
High-pass filter . . . 62
Highest side lobe . . . 63
Histogram . . . 63
Hooke's law . . . 64
Humar's method . . . 65
Hunt's relation . . . 66
Hydraulic actuators . . . 69
Hysteresis . . . 71

I . . . 75

Identification test . . . 75
Immittance . . . 75
Impedance . . . 75
Impulse domain . . . 75
Impulse factor . . . 75
Impulse response . . . 76
Inertance . . . 77
Inherent power gain . . . 78
Initial peak sawtooth (IPS) shock . . . 79
In situ testing . . . 82
Integral $I_b(h)$ . . . 83
Irregularity factor . . . 85
Irregularity factor of response to noise of a constant PSD . . . 88

J . . . 91

Jerk . . . 91

K 93

Kurtosis 93

L 103

Laplace transform 103
Largest peak on average over a duration T 110
Leakage 112
Life profile 112
Linear system 114
Linear 1 DOF mechanical systems 114
Logarithmic decrement 115
Log-normal distribution 117
Low-pass filter 122

M 129

MA method 129
Margin factor 129
Maximax response spectrum 129
Maximum coefficient of variation 129
Maximum frequency 133
Mean 133
Mean frequency (average number of zero crossings with positive slope) 134
Mean number of positive peaks per second 135
Mean squared error 136
Mean stress 136
Measuring vibrations and shocks 137
Mechanical shock 138
Miles' relation 139
Miner's rule 142
Minvar (Capon's method) 145
Mobility 148
Modal combination rules 152
Mode 161
Modified root of sum squares (MRSS) 162
Moments 163
Moving average method (MA) 168
Multitaper 169

N 181

Narrowband noise. 181
Natural frequency of a 1 degree of freedom linear system 182
Noise 184
Non-central t-distribution 184
Nonlinear damping 189
Nonlinear stiffness 190
Non-parametric methods. 193
Normalized equivalent noise bandwidth 196
NRL method (U.S. Navy – Naval Research Laboratory). 198
NRC grouping method 199
Number of cycles necessary for a given reduction in amplitude 199
Number of maxima per unit time. 200
Number of threshold crossings per second 202
Number of zero threshold crossings per second 202
Nyquist diagram. 203
Nyquist frequency 205
