Preface ix

List of Symbols xiii

S 1

Safety factor 1
Sampling 1
Sampling frequency 1
Sampling test 8
Scalloping loss (or picket-fence effect or resolution bias error) 9
Series test. 10
Shannon's theorem 10
Shape factor 11
Shock machine 11
Shock response spectrum 24
Shock response spectra domains 27
Shock testing using shaker 34
Short-term Fourier transform (STFT) 38
Side lobe fall off rate 44
Signal-to-noise ratio 45
Similitude 46
Simple (or perfect) shock 49
Sine on random vibration 49
Sinusoidal vibration 68
Situation 73
Skewness 73

Sliding mean . . . 76
Sliding mean filter . . . 80
Slope of the SRS at the origin . . . 84
Smearing . . . 87
Smoothing . . . 88
S-N curve . . . 88
Söderberg relationship . . . 92
Spatial combination rules . . . 92
Specification . . . 94
Specifications based on real environmental data . . . 97
Spectral quality . . . 98
Spectral resolution . . . 98
Spectrogram . . . 102
Square shock pulse (or rectangular shock pulse) . . . 103
SRSS method (square root of sum of squares) . . . 106
SRSS for spatial modal combination . . . 108
SRSS3 rule . . . 109
Standard . . . 109
Standard deviation . . . 111
Standard deviation of largest peak distribution . . . 112
Standard error . . . 112
Stationarity . . . 112
Statistical error . . . 113
Statistical error for any confidence level . . . 122
Statistical error of other parameters . . . 124
Step response . . . 125
Stiffness . . . 134
Strain rate . . . 134
Strength coefficient of variation . . . 136
Strength dispersion . . . 140
Strength distribution laws . . . 141
Stress screening test . . . 144
Student distribution . . . 144
Subspace methods . . . 146
Sum of two random processes . . . 146
Surtension . . . 148
Susceptibility . . . 148
Sweep duration . . . 149
Sweep mode . . . 153
Sweep rate . . . 156
Swept narrowbands on a wideband random vibration . . . 156

Swept sine 159
Swept sine on random vibration 164
Systems with several DOFs 168
